

Tip 16: HoseSelect puts selling at your finger tips

Did you know that the **HoseSelect™** digital tool helps users narrow selection for Industrial hoses quickly and puts selling value in the palm of your hands. Industrial hoses are chosen based upon a few key pieces of information which the industry calls “STAMPED” data. STAMPED stands for: Size, Temperature, Application, Material transported, Pressure, End configuration (ie. Fittings), Delivery.

ContiTech’s Web / Mobile optimized tool, **Hose Select™** guides users through dropdown selection options to help them choose hoses that meet their STAMPED data electronically putting hose information in the hands of customers when they need it.

The Hose Select tool pulls data from the Industrial Hose Virtual Catalog database and will output Virtual Catalog data pages.
