

Tip # 23 Paladin Drop Hose

Did you know that Paladin Drop Hose is now Lighter and More Flexible than ever?

The redesigned Paladin hose is now more flexible and has a lighter weight which helps reduce operator fatigue while maintaining the robustness your accustomed to in our petroleum drop hoses. A running design change in production began Jan 29, 2018. All part numbers will remain the same.

Updated Crimp Specs are available in the [ContiTech Crimp Assembly Manual](#)

The Paladin Drop hoses are used to transfer bio-diesel and ethanol blends, gasoline and other petroleum products under pressure, gravity flow or medium suction at ambient temperature. Its outer PVC helix provides abrasion resistance and a low co-efficiency of friction, with anti-static wire. Remember to use ContiTech Insta-lock couplings for assemblies.

If you have any questions regarding this #didyouknow tip, please contact IFS Industrial Hose Product Manager, Laszlo Dobo by phone, (330) 664-7071, or e-mail, Laszlo.Dobo@ContiTech.us.
