

Tip # 45: Accessories for F&B hoses – Protection Ring

Did you know that you can increase the return on your investments by using protection rings?

Selecting the right hose to the application following the STAMPED information is the first step. Proper installation and handling of the flexibles are necessary to maintain the integrity of the hose assemblies and ensure the proper hygienic conditions.

Continental ContiTech have been proposing to install rubber rings on your Food & Beverage hose assemblies to increase the lifetime of the hose assembly by ensuring easy hose handling. Furthermore:

- ❑ The protection rings made from Natural Rubber protect sealing surfaces of the fittings during installations and handling of hose assemblies production.
- ❑ Designed to fit common hose sizes and easy to install before or after assembly, depending on the type of the coupling / threads.
- ❑ By elevating the hose from the ground the rings prevents water damming on the floor.

Continental ContiTech offers a wide range of hoses that will give you the solution for the most hygienic transfer in food & beverage industry.

For further information on our food hoses, please e-mail us at industrialhose@contitech.us

RUBBER PROTECTION RING FOR FOOD & BEVERAGE HOSE SYSTEMS

Application

The handling of flexible lines is often characterized by harsh handling. Hoses are stressed by pulling over the ground so that fittings in the area of the sealing surfaces can be damaged. The result is a leaking hose lines and / or damage to floor coverings and to the sealings of the tank tanks. Continental's elastic rubber protection rings made of natural rubber (NR) protect against this danger.

- › Protects the sealing surfaces of the fittings during installations and handling of hose assemblies
- › Designed to fit common hose outer diameters
- › Easy installation
- › Increases the lifetime of the hose assembly by ensuring easy hose handling
- › Protects the ground at your site
- › Prevents water damming
