

## Tip 47: When Is a 2-Wire Hose More Than a 2-Wire Hose?

### WHEN IT IS CONTINENTAL'S **XR16SC** HOSE

- Working pressure is 5000 psi and higher on -04, -06, and -08 hoses.
- Meeting or exceeding SAE specs for 100R16 through -20.
  - -24 and -32 analogs (no SAE specification exists) on test and completed testing, respectively.
  - -32 working pressure of 1600 psi.
- Half the bend radius of 100R2SN hose.
- Smaller profile for easier routing and lower weight.
- Extended-Life, XR cover provides up to 5x the abrasion resistance of our standard cover SR2SN hose.
- It is more economical – not just in performance, but in actual price, compared to our SR2SN hose.
- All hoses use Continental's B2- family of 1-pc, no-skive, Ultra-Crimp fittings.

**XR16SC now makes up 70% of 100R16 and 100R2SN sales. Get on the bandwagon, in stock today and everyday along with the fittings you need!**
